Subject: RE: CSO Presentation

PVSC has asked for a chronology of the Phase I work – they would like to understand better how long it took to get the samples. It would help to add a slide summarizing Event #1/Attempt #1 → why that led to Attempt #2, etc...

Slides 7 & 8: Remove statements about LSM laboratory sample method processing not being feasible at full scale, because LSM method HAS been implemented successfully elsewhere. If you must include such a statement, clarify by saying that Tierra's laboratory was unable to implement LSM.

Slide 7, 2nd bullet under "Laboratory Implementability" should say "Tierra did not evaluate performance of cartridge filters", because it's not that you were unable to evaluate, you just didn't.

Slide 8, 4th HSM bullet: should be clarified to say "HSM field implementation challenging because there is only one centrifuge to be used per storm event" (as it is, the bullet doesn't make much sense).

Slide 8, under HSM bullets: should add that HSM dissolved was not filtered down to .45 microns

Slide 9, 1st bullet, 3rd subbullet: clarify whether the samples will be collected in wet or dry weather (should be different for SWO vs CSO vs interceptor?) – same question for slide 11, 1st bullet, 3rd subbullet.

In addition, we talked about this briefly at our last meeting – we would like to see the results from Phase 1 in terms of mg/l, for comparison to historical data. That doesn't necessarily have to be presented at the meeting tomorrow, but we would like to see your calculations before making a final decision on Phase 2 methodology.

Subject: CSO Presentation

Good Afternoon Alice,

Please see attached for the presentation we plan to give at our meeting next week.

Let me know if you have any feedback.

Thanks

Brian Mikucki
